Optimized for engine power and fuel efficiency. The new DOHC i-VTEC is integrated with Honda's new Earth Dreams Technology where fuel consumption is vastly reduced without compromising performance. The i-VTEC engine produces high torque at low rpm and high horsepower at high rpm is combined with the 7- speed +/- CVT transmission to deliver the smoothest driving experience. Its low centre of gravity design improves handling and boosts your confidence at each bend you take. ### 智能泊車輔助系統

對大型MPV而言，泊車可能是最艱巨的挑戰。但本田ODYSSEY卻等閒視之，即使遇上較難駛入的車位，在智能泊車輔助系統的協助下，ODYSSEY都能以自動倒車的方式完成任務。事實上，你只需配合系統指示控制油門及波檔，ODYSSEY就會自動駛入任何標準S型車位或L型車位。加上全方位影像系統，提供多角度視野，讓你隨時掌握路面實況。

### Smart Parking Assist System

with the use of sensors and cameras installed around the car, the Smart Parking Assist System helps determine whether a spot can fit your car. The main purpose of the system is to expertly steer your car into a space while you control the brakes and gear selection. With this system, you will be able to park into any standard right angle or parallel space.

Monitored by the omniscient 360-degree multi-view camera system, everything is now in perspective.

## 前方碰撞預防警示系統 (FCW)\* Forward Collision Warning (FCW)\*

當系統偵測到車輛與前方車距太近，而有機會發生碰撞時，會透過警示音與儀表板警告圖示，提醒駕駛者，避免碰撞發生。

By constantly keeping an eye out for vehicles ahead, Forward Collision Warning (FCW) reduces the stress of driving in heavy traffic. If the system determines that a collision may occur, you'll be given an instant visual and audible alert to help you avoid whatever is in your path.

## 主動車距調節定速巡航系統 (ACC)\* Adaptive Cruise Control (ACC)\*

系統能監測駕駛車輛與前車的距離，並在有需要時自動調降車速，以維持安全車距，且會視乎道路狀況而自動回復預設的巡航車速。

By detecting the vehicle in front of you, this lets you maintain a set speed and following distance without you having to keep your foot on the brake or accelerator.

## 車道維持輔助系統 (LKAS)\* Lane Keeping Assist System (LKAS)\*

系統透過鏡頭識別車道兩側行車線，能自動提供轉向輔助力度，確保車輛盡量行駛在車道中間位置。

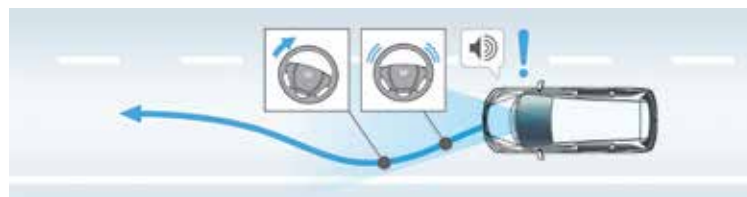

The Lane Keeping Assist System will read the lane and sense as you drift from its centre, applying corrective steering torque to maintain perfect lane position.

## 道路偏離抑制系統 (RDM)\* Road Departure Mitigation System (RDM)\*

當系統偵測到駕駛車輛異常偏離車道時，會通過方向盤的震動和儀表板警告圖案來提醒駕駛者，並以輕度力道來推動方向盤，導正行車方向。若出現大幅度的偏離，系統更會自動減低車速，確保駕駛安全。

If the Road Departure Mitigation System detects that the vehicle is likely to stray from a detected lane, the system will give a visual warning on the display and vibrations on the steering wheel to alert the driver. If the system detects that you are drifting out of a lane with solid lines without signalling, you'll be steered gently back into the lane. In rare cases, gentle braking will be applied to keep you safe.
