Advanced Driver Assistance System (ADAS) is not a substitute for human eye and driver vigilance, it is a driver assist system that enhances driving experience and safety. The driver shall remain responsible for safe, vigilant and attentive driving. Images & depictions are for illustration & representation purposes only. Features and specifications as shown in the brochure are not standard for all variants. MG Motor India urges drivers to follow traffic rules which are meant to keep them safe on roads.

GLOSTER

The name 'GLOSTER' pays homage to MG's British genes and stands for being **Bold, Sturdy, Reliable and Versatile**. GLOSTER was a British jet-engine aircraft prototype & the name is a nod to great British engineering. With best-in-class features, a towering road presence, powerful capability, and luxurious interiors, the GLOSTER is designed to set new benchmarks.

G L O S T E R

#TheSelflessCar

The MG GLOSTER isn't just another car; it's a car that thinks only about you. Your safety, your comfort. All the time. With its many intuitive features and personalisation options, it remembers what you like and want. It adapts and adjusts for you. When you take it for a spin, it looks out for you, doesn't let you drift away or get in a tight spot. All it thinks about is, how you drive. What's ahead of you? What could be your next move?

One could say that the GLOSTER has just one thing on its mind. You.

What would you call such a car?
At MG, we call it the **selfless car**.

DESIGN INSPIRATION

When perfection meets personalization, it brings new meaning to what we perceive as the epitome of luxury to be. Inspired by the multiple facets of the world around us, we translated it into a unique design language that magnifies the dynamics of power and luxury to compliment **YOU**.

MG GLOSTER is born out of the beauty of 'Art of Surfing'.

The floating roof design makes up for its distinct language.

The octagon signature grille which in oriental philosophy signifies good health and fortune.

Diffused lightguide in tail lamp is inspired by unique racetrack pattern.

ADAS

ASSISTED AND INTUITIVE DRIVING

ADAS is a group of safety and convenience functions intended to improve comfort for drivers and road safety, and preventing or reducing the severity of potential accidents. ADAS can do all this by alerting the driver, implementing possible safeguards in the vehicle & automating driving controls (based on the driving automation level of the vehicle). While Autonomous Level-5 denotes the global future dream of completely driverless cars, Level-1 acts as a driver assistant and the vehicle is dependent on the driver to monitor the driving environment and conditions.

*Advanced Driver Assistance System (ADAS) is not a substitute for human eye and driver vigilance, it is a driver assist system that enhances driving experience and safety. The driver shall remain responsible for safe, vigilant and attentive driving.

ADAS FEATURES

ADAPTIVE CRUISE CONTROL (ACC)

Adaptive Cruise Control, also known as ACC is an advanced version of cruise control, particularly helpful for long drives as it senses the road ahead and enables the vehicle to control its acceleration and braking to achieve desired speed but also maintain safe distance from cars ahead. It can also come in handy while waiting at the red light and rush hour commuting. It is a full range cruise control that simply put, can just automatically follow the car in front of you as it can speed up to 150kmph and can slow down even to zero to achieve pace set by the driver while keeping a safe distance from the car in front of you as per the safe interval set by the driver.

AUTOMATIC PARKING ASSIST (APA)

This system is a parking assist system for assisting in typical parallel and vertical parking. Once turned on, the ultrasonic sensor searches and judges the parking space. Once sufficient parking space is detected, the vehicle will assist you in parking by controlling the steering movement automatically and telling the driver when to apply reverse and drive gear and apply brake. This technology helps to solve common parking problems in densely populated urban areas. Automatic parking technology can park the car in smaller spaces. This makes it easier for car owners to find parking spaces, while taking up less space.

FORWARD COLLISION WARNING (FCW)[#]

For the odd time or two when your gaze may falter from the road, it can have grave repercussions. However, the Forward Collision Warning, alerts the driver with both visual and acoustic signals when a potential collision is detected with a four-wheeler, two-wheeler or a pedestrian. The system is designed to alert and bring back the driver's attention and reduce the probability of a collision.

[#]FCW alerts the driver of a possible collision by detecting pedestrian, bicycle or vehicle in front through visual and acoustic sign.

ADAS FEATURES

AUTOMATIC EMERGENCY BRAKING (AEB)*

In case, the driver takes no or insufficient action on the FCW alert and warning for potential collision with a four wheeler, the Automatic Emergency Braking will get activated and apply brakes on your behalf to further prevent or reduce the severity of the possible collision.

BLIND SPOT DETECTION (BSD)

Sometimes, even after adhering to all rules of the road and maintaining road decorum, mishaps happen on the account of things out of your control. Blind Spot Detection systems use sensors to provide drivers with important information that is otherwise difficult or impossible to obtain. This feature detects and alerts the driver of any sudden movements in his/her blind spot – be it over-taking vehicles or side-lane strafing by motorcyclists.

LANE DEPARTURE WARNING (LDW)

Lane Departure Warning uses a camera to detect lane markings ahead and monitors the vehicle's position in its lane. When the function detects that the vehicle is unintentionally, without signalling about to move out of its designated lane, it warns the driver by means of visual and acoustic signals.

*AEB activates braking intervention to help in preventing collision at slow speed or reduce speed of collision by decreasing the vehicle speed by 40 km/h at most (braking intervention for four-wheelers only).

INTELLIGENT
4WD

CAPABLE BEYOND CONVENTION

With great power and capability that the MG GLOSTER comes with, it stands true to the values it reflects and delivers on what its made for - the outdoors and the adventures. Built on the next-generation intelligent 4 wheel drive system, the MG GLOSTER takes on and tackles all kinds of terrains that come its way.

*Selflessness, in the world of
MG GLOSTER, is going above
and beyond for your needs.*

ELECTRO-MECHANICAL DIFFERENTIAL LOCK (EDL)

The electro-mechanical differential lock ensures that even when the vehicle is stuck in a tough, slippery situation - it can still obtain a large driving force by transferring 100% torque to the wheel with traction. This feature grants you the confidence and control required to take on whatever challenge that comes your way.

A GLANCE OF EXTRAORDINARY

If the MG GLOSTER wasn't meant for taking on the roads, it would have definitely been scorching through skyscapes, leaving blazing trails of admiration and oomph in the air. The MG GLOSTER carries itself like a towering beacon of panache and versatility. While thoughtfully designed exterior aesthetics lend it its powerful demeanor, next-level automotive engineering adds to its versatile power and luxury – making it the modern marvel it is.
