FUEL CONSUMPTION AND CO₂ EMISSIONS

The fuel consumption and CO₂ emission values specified comply with the WLTP test procedure based on which new vehicles have been accepted since 1 September 2018. This WLTP procedure replaces the European Driving Cycle (NEDC), which was the test procedure used previously. As the test conditions are more realistic, the fuel consumption and CO₂ emissions measured according to the WLTP procedure are, in many cases, higher than those measured according to the NEDC procedure. The fuel consumption and CO₂ emission values may vary according to actual conditions of use and various factors such as: specific equipment, options and tyre types. Please contact your dealer for more information.
