Exterior

The Passat 140TSI Business combines style and functionality in a package that makes it a true all-round performer. Few other vehicles can offer effortless elegance with the same breadth of practical driving conveniences quite like this latest addition to Volkswagen's impressive model range.

The Passat makes an immediate impact when viewed from the front. Volkswagen's distinctive roundel is nestled within the Passat's sweeping radiator grille, which flows seamlessly into the vehicle's automatic LED headlights with daytime driving lights. The Passat's cohesive façade is completed by an air intake that integrates with LED fog lights.

The Passat's profile reinforces the impression that this is one of the most stylish vehicles on the road. A raked windscreen with rain-sensing wipers forms an essential part of the Passat's eye-catching silhouette. A long and lowered bonnet, short overhangs and long wheelbase add an air of sophistication while also conveying stability and purpose.

Striking 18-inch Dartford alloy wheels in Anthracite are given further impact by an assertive shoulder line that draws the viewer's eyes down the length of the vehicle to its distinctive rear shoulder. The overall effect is one of streamlined refinement and subtle confidence.

At the rear, LED taillights form an integrated whole with the Passat's rear panels and tailgate, while Passat badging on the tailgate adds an element of style to an already stylish vehicle.

With its understated aesthetics, flowing lines and comprehensive practicality, there's no doubt the Passat has been designed to impress.

01

Interior

Volkswagen takes the Passat's eye-catching elegance and continues the theme inside the cabin, which offers maximum comfort with an array of luxurious appointments throughout.

The smooth contours of the Passat's dashboard, which integrate with the driver and front passenger doors, are the first hint of the vehicle's superior interior aesthetics. An illuminated Passat logo forms an appealing centrepiece to the dashboard and sits above Volkswagen's impressive 8-inch Discover Media System. Black centre console trim and gear surround trim are the perfect complement to the Passat's stylish switchgear, while a spacious storage area for even the largest mobile phone is a practical and welcome addition.

Every attention has been made to making the driver comfortable and feel at one with the vehicle. The Passat's capacitive steering wheel is supple to the touch and offers outstanding response while driving. At the same time, the vehicle's Vienna leather appointed seats, which offer heating and 14-way electric adjustment for the perfect driving position, make even long journeys a breeze.

Both driver and passenger can adjust the ambient temperature exactly to their liking courtesy of the Passat's 3-zone climate control with Air Care. Rear vents and controls ensure rear passengers can regulate temperature and air flow as they require.

The Passat window blinds for both the sedan and wagon can control direct sunlight entering the cabin. An additional electric window blind for the rear window is available in the sedan version only.

Impressive fit and finish, outstanding space and Volkswagen's customary range of modern driving conveniences make the Passat unlike any other car on the road.

Safety

If you've driven a Volkswagen before you'll know that every attention is given to keeping vehicle occupants safe. An extensive range of driver assistance and safety features are included in every Volkswagen, but only now have they been brought under the one name – IQ. Drive.

IQ. Drive bundles together all of Volkswagen's driver assistance aids – those that exist now and those of tomorrow – with a view to reaching the end point of truly autonomous driving. The most advanced version of IQ. Drive has been incorporated in the Passat 140TSI Business, providing comprehensive peace of mind for driver and passengers alike.

Among the safety technology included in IQ. Drive is Travel Assist, an innovative system that allows for partially automated driving at a range of speeds. Travel Assist uses sensors, radars and a camera to observe the space around the vehicle and works with Lane Assist with Adaptive Lane Guidance and Adaptive Cruise Control (ACC) to provide effortless semi-autonomous driving.

Other technology is in place to mitigate accidents involving pedestrians and those small bumps and scrapes that all too often come with parking in tight spaces.

Pedestrian Monitoring will first alert the driver, and then implement an emergency braking procedure if needed, to avoid striking a pedestrian or cyclist about to cross the vehicle's path. Manoeuvre Braking intervenes to brake the vehicle when it senses a low-speed collision with an object is about to take place.

In extreme cases where a driver falls asleep or is incapacitated, the Passat's clever Emergency Assist function uses ACC and Lane Assist to detect steering, braking or acceleration inactivity. The system will initiate an escalating series of attempts to alert the driver, before performing a safe emergency stop as a last resort.

These systems work in conjunction with other trusted safety features in the Passat, such as Proactive Occupant Protection Multi-collision brake, Side Assist and more, to ensure safety with every drive.

02 Front Assist with City Emergency Brake* (City EB)

03 Adaptive cruise control*

Technology

Volkswagen's latest Passat offers an outstanding array of technological innovation that ensures driver and passengers experience the best of comfort, convenience and safety. Every drive is a pleasure thanks to the Passat's driver assistance aids, while the vehicle's suite of safety features combine to provide exceptional protection for you and your family.

Making its debut in Australia is Volkswagen's capacitive steering wheel, which detects touch by the driver and provides an interactive interface to systems such as Travel Assist.

This innovative technology enables partially automated driving from slow to highway speeds, with the driver able to resume full control of the vehicle simply by touching the steering wheel. The capacitive steering wheel recognises the driver's touch by means of clever 'hands-off detection' technology. The introduction of this technology represents a major step in the journey towards a fully automated driving future.

Also included in the Passat 140TSI Business is the next generation of Volkswagen's pioneering Discover Media infotainment system. While the look of the Discover Media system remains unchanged, it now offers lightning fast connectivity via Wireless Apple CarPlay® and high-speed USB-C ports.

Wireless Apple CarPlay® means efficient and trouble-free transfer of data when you use your favourite Apple CarPlay® apps. When you do connect your device, the illuminated USB-C ports in the Passat offer faster charging and the practicality of being able to insert it in either direction, unlike the previous USB-A slots.

01 Discover Pro 8" screen with Wireless Apple CarPlay®

02 Discover Pro 8" screen with Gesture Control

03 Rear View Camera (RVC Plus)

~App-Connect is compatible for selected apps with the latest smartphone versions of iOS and Android, active data service, and connection cable (sold separately).

*Safety technologies are designed to assist the driver, but should not be used as a substitute for safe driving practices.

Colours & Upholstery

Both the sedan and wagon versions of the Passat 140TSI Business feature Pure White paint, with a number of optional Metallic and Pearl Effect paint finishes included in the range. Pyrite Silver Metallic, Manganese Grey Metallic and Deep Black Pearl Effect are all available at an extra cost, as are eye-catching colours Reflex Silver Metallic and Aquamarine Metallic.

The Passat is as alluring inside as it is out, with Vienna leather appointed trim soft and comforting to the touch, and 14-way electric front seats with memory providing support exactly where it's needed.

Volkswagen Accessories

Our comprehensive range of genuine accessories give you the freedom to customise the look and feel of your Passat to reflect your own personality and individual sense of style.

For more information visit <https://www.volkswagen.com.au> or to experience the full range of genuine accessories designed to suit the Passat visit your local Volkswagen Dealer.

- 01 Luggage compartment tray
- 02 Door sill protection film
- 03 Roof bars
- 04 Towbar kit
- 05 Coat hanger

Overseas models are shown for illustrative purposes only. Optional accessories, at extra cost. Please note that the above accessories may have an effect on fuel efficiency. Items such as sports equipment are for illustration purposes only and are not available for purchase from Volkswagen Group Australia or its dealers. For a full range of Volkswagen Genuine Accessories, please visit an authorised Volkswagen Dealer.

Peace of Mind

5 years Unlimited Kilometre Warranty

At Volkswagen, we pride ourselves on the highest quality standards that come with German engineering.

We back this commitment with a 5 year unlimited kilometre warranty on all new Volkswagen vehicles*.

1 year Roadside Assist

Every new Volkswagen comes with a 1 year Roadside Assist membership^.

That's 24 hour roadside assistance, emergency accommodation, car rental and towing as well as property and other assistance, all included for added peace of mind.

Volkswagen Care Plans

Volkswagen Care Plans† have you covered for your first 3 or 5 scheduled services, providing you savings off the total Assured Service Pricing RRP. It's convenient, hassle-free scheduled servicing easily available for purchase at your local Volkswagen Dealer.

Assured Service Pricing

Assured Service Pricing# gives you the transparency of knowing how much your service will cost up front.

Our Volkswagen Dealers have access to the latest diagnostic equipment and tools. Plus, they use Volkswagen Genuine Parts® to ensure your Volkswagen stays a Volkswagen.

You're in safe hands at your Volkswagen Dealer when it comes to servicing.

*Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners/warranty.html>. Your rights under this warranty are provided in addition to, and in some cases overlap with, consumer guarantees under the Australian Consumer Law and do not limit or replace them.

^Volkswagen Roadside Assist is provided by AWP Australia Pty Ltd ABN 52 097 227 177 trading as Allianz Global Assistance, under an arrangement with Volkswagen Group Australia Pty Limited ABN 14 093 117 876. Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners/roadside-assist.html>.

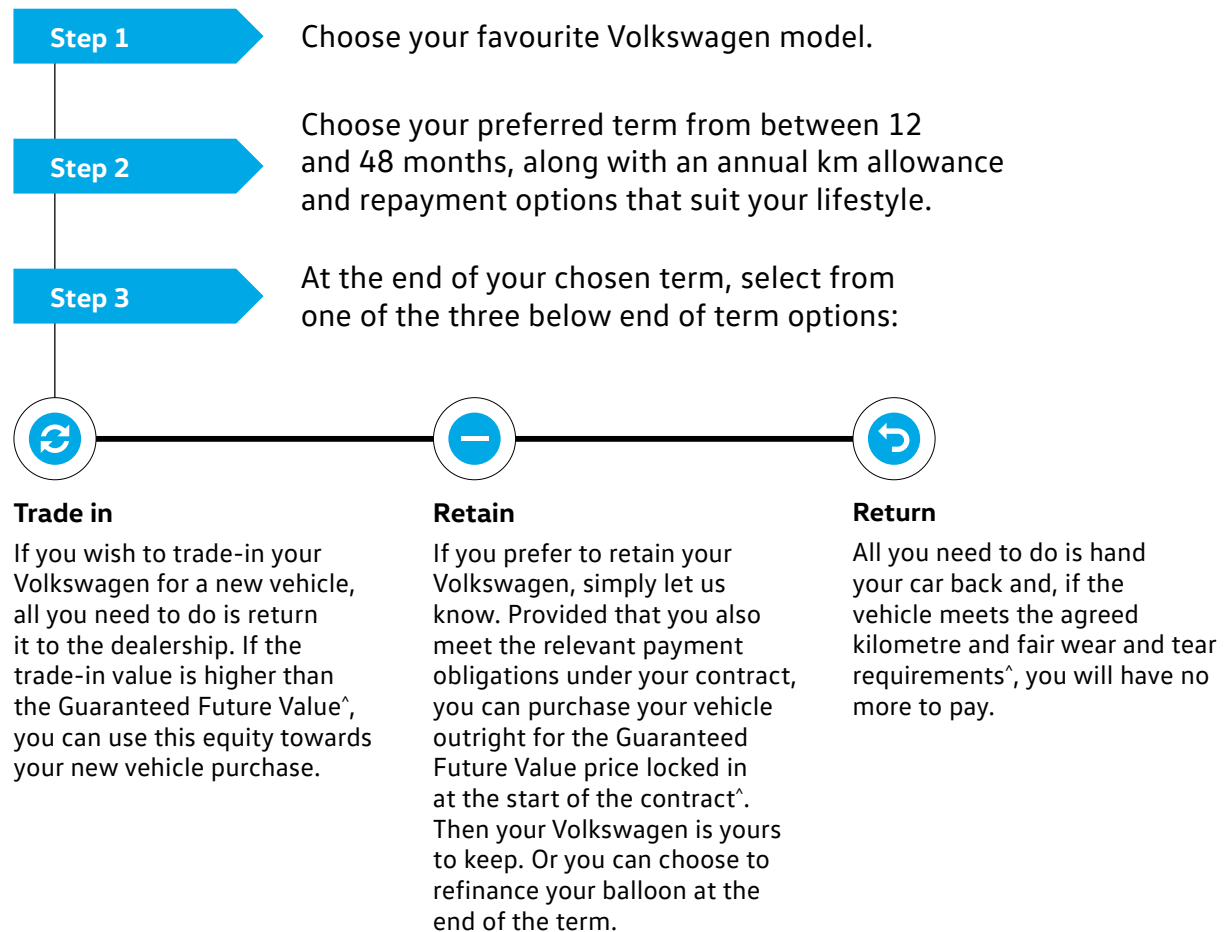

†Volkswagen Care Plans are available at participating Volkswagen Dealers for all models and covers standard items as contained in each scheduled service interval only. These Care Plans can only be purchased prior to the first scheduled service and up to 22,500 km/15 months (whichever occurs first) for all models except Volkswagen Crafter models, which is 30,000 km/15 months (whichever occurs first). The timeframe takes effect from when the vehicle is first reported in our system as 'sold'. Discount structure varies by model. For details of what is not included in a scheduled service, see <https://www.volkswagen.com.au/en/owners/volkswagen-care-plans.html>.

#Assured Service Pricing applies to the first 5 standard scheduled services of your vehicle which are scheduled to occur at every 15,000 km/12 month interval (whichever occurs first) or for Volkswagen Crafter models only, 20,000 km/12 month interval (whichever occurs first). On or before 31 December each year, Volkswagen will publish the maximum price for a specified Scheduled Service that will be applicable from, and remain fixed for, the following calendar year only. For details on the Eligible Model List, pricing, items not included and for full terms and conditions, please see <https://au.volkswagen.com.au/service-pricing-guide>.

Volkswagen Choice

Naturally we understand that your Volkswagen represents a valuable investment, so we understand that you want to maintain it in premium condition. Volkswagen Choice[^] is a finance program tailored to the requirements of Volkswagen owners by providing assurance around your Volkswagen's future value[^], whilst offering simple monthly instalment financing options.

Whether you are selecting your new Volkswagen for business or personal use, you can choose the contract term that best suits your requirements. Enjoy the confidence that comes from having locked in a minimum value up front to be attributed to your vehicle at the end of your contract[^]. There are also no account keeping fees with a fixed interest rate.

[^]The Volkswagen Choice Program consists of an option to return the vehicle to Volkswagen Financial Services (VFS)** at the end of the term and require VFS to purchase the vehicle at price known as the Guaranteed Future Value (GFV) as determined by VFS. At the end of the term, you can elect to: (1) trade-in the vehicle; (2) exercise the option to return the vehicle; or (3) retain the vehicle by paying the GFV, which is a lump sum owed to VFS at the end of the loan term after all repayments have been made. You will be liable for any loan contract deficit and additional charges, if you exceed the nominated kilometre allowance and/or the vehicle is not in an acceptable condition. Available on new and demonstrator Volkswagen vehicles for selected models. Contact your nearest Volkswagen dealer to verify eligible vehicles for this program. Fleet, government, rental buyers, hire car and chauffeur companies excluded.

**VFS is trading name of Volkswagen Financial Services Pty Ltd ABN 20 097 071 460, Australian Credit Licence 389344.

Glossary

Adaptive Cruise Control (ACC)

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the Passat approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Passat then accelerates up to the preset desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates in vehicles equipped with a DSG transmission. ACC can be reactivated automatically by depressing the accelerator pedal. In vehicles fitted with a manual transmission, the system is automatically deactivated at speeds below 30 km/h and the driver is prompted to take charge by visual and acoustic signals.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-Slip Regulation (ASR)

ASR improves driving and steering characteristics by preventing the driven wheels from spinning under acceleration. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system automatically reduces engine torque. ASR is a switchable traction control system.

Auto Hold function

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicles final braking pressure. So even when you take your foot off the brake pedal, all four wheels brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Direct Shift Gearbox (DSG)

DSG is a manual gearbox in which the gearshifts are controlled electronically. What makes the DSG unique is that it has 2 separate gear sets operated by 2 clutches.

The benefit of 2 gear sets and 2 clutches is that one gear set and clutch is engaged driving the vehicle with the second disengaged clutch having already pre-selected the next gear awaiting for power to be transferred. As the next gear has already been pre-selected prior to power being applied, the gear change only takes 3-4 100ths of a second. There is virtually no interruption to power, traction or acceleration.

The DSG also offers Tiptronic gear selection and sports mode.

Driving Profile Selection

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Normal, Sport, Eco and Individual. The Normal profile offers a comfortable but dynamic driving style. Sport provides faster response of the accelerator pedal and steering while the DSG switches to Sport mode. Eco mode has been designed to enhance fuel efficiency by including coasting function (with DSG) and by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

Coasting Function

While driving, as the driver's foot is taken off the accelerator pedal the engine is declutched, allowing the vehicle to coast and roll over a longer distance. The momentum of the vehicle is used to save fuel with a foresighted driving style. When the brake, accelerator pedal or the gear selector lever is operated, the clutch is re-engaged and engine braking / drive takes effect. Coasting Function can be selected or deselected via the multifunction display settings. The gear selector lever is required to be in the D position to be functional.

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

Glossary

Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Emergency Assist

Emergency Assist monitors the driving characteristics and recognises, within the limits of the system, if the driver suddenly becomes incapable of driving (due to the vehicle not being controlled).

Emergency Assist detects a lack of activity on the part of the driver and issues repeated visual and acoustic warnings and initiates a quick jolt of the brakes to request the driver to take control of the vehicle.

If the driver remains inactive, the system automatically controls acceleration, braking and steering to slow the vehicle down and keep it in the lane. If there is sufficient stopping distance, the system decelerates the vehicle to a complete stop and switches on the electronic parking brake automatically.

When Emergency Assist is actively controlling the vehicle, the hazard warning lights are switched on and the vehicle performs a slight snaking motion within its lane to warn other road users. Ideally this will prevent a collision, or at least reduce its severity.

Emergency Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Emergency Assist utilises both the Adaptive Cruise Control (ACC) and Lane Assist driver assistance systems. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the front wheel on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

Driver Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 65 km/h, and calculates a fatigue estimate.

If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Driver Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Front Assist with City Emergency Brake (City EB) and Pedestrian Monitoring functions

The Front Assist ambient traffic monitoring system uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

The traffic ahead is monitored constantly by the radar at the front. If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

The City Emergency Brake (City EB) function is a radar based emergency braking system designed to help a driver avoid a low-speed crash or to reduce its severity. At vehicle speeds below 30km/h, City EB monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, City Emergency Braking first pre-charges the brakes and makes the emergency Brake Assist system more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, City Emergency Braking independently applies the brakes very hard. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, City EB will deactivate and allow the driver to complete the avoidance manoeuvre.

Pedestrian Monitoring is an extension of the Front Assist monitoring system featuring the City Emergency Brake. The system uses a radar sensor in the radiator grille to monitor the area in front of the vehicle and within the limits of the system, register certain situations, for example a pedestrian stepping onto the road suddenly. The system then gives an immediate acoustic and visual signal to warn the driver. If the driver does not brake, the system initiates a jolt of the brake as a warning about the critical situation, while at the same time preparing for hard braking. If the driver fails to react, the system automatically performs emergency braking, within system limits. Ideally this will prevent a collision, or at least reduce its severity.

Front Assist with City Emergency Brake (City EB) and Pedestrian Monitoring cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Manoeuvre braking

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised, emergency braking is initiated to minimise possible damage.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

Glossary

Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

Lane Assist

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration and is asked to take over the steering. Additionally, if no active steering movements by the driver are recognised for longer than approximately 8 seconds, a message will appear in the Multi-Function Display in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

When adaptive lane guidance is active and the system detects both lane markings to the left and right of the vehicle, the function provides permanent assistance while the vehicle is in motion. The system adopts the preferred position within the lane in which the vehicle is travelling. For example, if the vehicle is being driven slightly off-centre in the lane, the system will learn to adopt the new position within a short period of time.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

Side Assist with Rear Traffic Alert

Side Assist, is a lane change assistant that detects vehicles on the right and left hand side of the lane, in the blind spot and those vehicles coming nearer behind. The system informs with a warning light in the exterior mirror whenever a detected vehicle is close and a lane change would be dangerous. If the driver sets the indicator, the warning light begins to flash.

Rear Traffic Alert warns the driver of approaching traffic at the rear of the car when reversing via an audible warning followed by a visual message in the Optical Parking System (OPS).

Park Assist

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

Travel Assist

Travel Assist allows for partially automated driving across practically the whole speed range from slow moving stop and go traffic to highway speeds. Travel Assist is designed to assist the driver, it is not a fully autonomous driving system as it still requires input and attentiveness from the driver. With the press of the Travel Assist button on the steering wheel, the Passat's sensors, radars and camera observe their surroundings. The system automatically activates adaptive lane guidance and adaptive cruise control to allow semi-autonomous driving on highways.

Travel Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Travel Assist has been developed for use only on motorways. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.
