Electronic stability control (ESC) with 4-wheel-drive assistance control

Electronic stability control (ESC) with 4-wheel-drive assistance control are functions that minimize the risk of running off course in the event of entering a curve at high speeds. 4-wheel-drive assistance control distributes traction to the rear wheels while Electronic stability control (ESC) exerts braking in the inner rear wheel to help control the vehicle in advance, at a stage before conventional Electronic stability control (ESC) systems would have been activated. They deliver more stable driving performance by helping drivers control their vehicle at will and improving driving agility.

Flex Steer™ system

Flex Steer™ system enables drivers to choose among three driving modes (Normal/Comfort/Sport) according to their preference. A dedicated switch embedded in the steering wheel is easy to operate and can be switched while driving or when the vehicle is still.

6-airbag system

An optimal performance airbag system has been installed to minimize the injuries of not only the driver, but also the passengers in the passenger and back seats. Side and curtain airbags minimize injuries from side collisions.

6-speed automatic transmission

The performance of the 6-speed automatic transmission of Grand Santa Fe, which has been upgraded in terms of efficiency, economy and durability, enables drivers to experience both the pleasure and convenience of driving.

The audio system, which allows you to enjoy various media including radio, CDs and MP3 files, provides outstanding life-like sound through its virtual sound features. The optional audio system comes with a 4.3" color TFT LCD monitor and optimally placed function buttons to make listening to music even more convenient.

Rear-view display system

while backing up or parking.

A rear view camera promotes safe driving and parking by enabling drivers to see the back of their vehicle through a monitor

Steering wheel remote control

Various switches are embedded in the steering wheel so that drivers can easily operate audio and Auto cruise control functions while driving without being distracted from the road.

Supervision cluster with color TFT LCD A sharper and more sophisticated Supervision

cluster, with its 4.2" color TFT LCD, makes it easy to view a wide range of driving and vehicle status information and completes the futuristic interior design of Grand Santa Fe.

SEAT VARIATIONS

Grand Santa Fe guarantees optimal efficiency in all its seats, from the 1st row to the 3rd, with a practical interior layout that provides convenience and comfort no matter how it is figured. For the 7 seats, the 2nd row seats can be divided into a 4:2:4 ratio and both backrows can be folded flat to accommodate diverse types of cargo. The 6 seats provides extra room and armrests for the 2nd row passengers, while the 3rd row seats can be folded flat to ensure maximum versatility. All you need to do now is get your plans together for a family trip with Grand Santa Fe.

Grand Santa Fe's rear seat layout was designed to provide passengers maximum comfort. Its 2nd row seats remote folding feature conveniently creates a large cargo space with the activation of a lever.

Power tailgate system

Loading and unloading cargo has become even more convenient thanks to the switch in the driver's seat, the remote control or the button in the tailgate, which can be operated with a simple touch of the fingertip.

Front seats adjustment with Integrated memory system (IMS)

The ergonomically designed front seats can be adjusted conveniently to suit individual physical conditions, while a 4-way lumbar support and a button-operated headrest provide greater comfort. The driver's seat also comes with a built-in IMS function that can automatically recall seat and side mirror positions.

Panorama sunroof

Grand Santa Fe's panorama sunroof offers even more openness compared to conventional panorama sunroofs by eliminating the center beam of the headlining and using motor–driven roller blinds.

Full auto air conditioning system

The driver and the passenger can each set their own temperature while a ventilation system in the 2nd row creates a pleasant environment for those seated in the back.

3rd row air conditioning system

The passengers of the 3rd row seats can also control their own temperature by using a dedicated heater and air conditioning system.

Front & 2nd row seats warmer

Seats can be heated not only in the 1st row but in the 2nd row as well, making you feel warm and snug and letting you enjoy a pleasant ride even in the coldest of winters.

People's expectation toward individual mobility requires more than just a convenient means of transportation. The old understanding of cars has become outdated. A car represents individuals' lifestyles, and it became an integral part of their lives. At the same time, the automobile industry has experienced seismic change. Hyundai Motor Company has grown rapidly to become one of the largest automakers, backed by world class production capability and superior quality. We have now reached a point where we need a qualitative approach to bring bigger ideas and relevant solutions to our customers. This is an opportunity to move forward and we have developed a new brand slogan that encapsulates our willingness to take a big leap. Led by our new slogan and the new thinking underlying it, we will become a company that keeps challenging itself to unlock new possibilities for people and the planet.
