Touareg 190TDI Premium with optional Innovision package shown.

Exterior

With its perfect proportions, smooth contours and purposeful styling, the Touareg range has been designed for maximum visual impact. No matter the angle it's viewed from, Volkswagen's latest SUV offers a bold statement of intent – this is a vehicle that looks as good as it performs.

Wider and longer than its predecessor, the Touareg is nevertheless lighter thanks to the combination of aluminium and high-tech steel used in its construction.

The Touareg's strong silhouette is assisted by its longer bonnet, which extends down to LED headlights in the 190TDI variant and new IQ. Light Matrix LED headlights in the 190TDI Premium variant set either side of an assertive front grille. Chrome strips extend from the Volkswagen roundel, framing the headlight and grille assembly and presenting an attractive facade to oncoming traffic.

The chrome theme continues down the length of the vehicle, with chrome highlights featured around the window frames and lower body side mouldings. A bold character line draws the eye from front to rear, emphasising the Touareg's sleek profile and powerful, sculpted shoulders.

Perfectly complementing the vehicle's dynamic appearance are striking 19-inch 'Osorno' alloy wheels in the 190TDI, with larger 20-inch 'Montero' alloy wheels a feature of the 190TDI Premium variant.

The back end of the Touareg is all style and practicality. Premium LED taillights on the 190TDI Premium sit broadly across the rear panels and tailgate, offering a sense of cohesion and minimalist design. The Touareg's electronic tailgate with Easy Open & Close takes the hassle out of opening the boot, while under the tailgate are eye-catching chrome trapezoidal tailpipes set either side of a sporty diffuser.

Perfect aesthetics and impressive design features front to rear come together to create an SUV with palpable on-road presence.

Interior

The Touareg's sophisticated and comfortable cabin is the perfect match for its sporty and dynamic exterior styling. Spacious design, impressive fit and finish, and an array of technological conveniences combine to create a driving experience that is at once luxurious and deeply satisfying.

The Touareg's electric front seats have been designed to provide maximum comfort even on long journeys. Driver and front seat passenger can enjoy perfect temperature regulation by altering the heat setting. And front seat occupants in the 190TDI Premium Touareg can revel in the vehicle's ventilated seats with 18-way electrical adjustment, pneumatic side bolsters in both the seat cushion and backrest, and a special massage function with eight pre-set massage programs.

The dashboard is the epitome of sophisticated and functional design. Nestled in front of the three-spoke leather-covered, flat-bottomed steering wheel is the instrument cluster with large multifunction display. It blends into a contoured dashboard that features Volkswagen's impressive 9.2-inch Discover Pro infotainment system with App-Connect[~], four USB ports and a facility for inductive wireless charging of your smartphone.

Driver and passengers can maintain the perfect in-cabin temperature thanks to the Touareg's Air Care 2-zone climate control air-conditioning system with hard key control. Switchgear for the vehicle's climate control system falls readily to hand and allows for easy adjustments to temperature and air flow.

Sophisticated touches abound throughout the cabin, such as chrome trim on the air vent surrounds, brushed aluminium inserts on the dashboard and flooring, and a gearshift knob with leather and aluminium finish. Ambient interior lighting lends a distinguished air throughout.

Proving that the Touareg's cabin is as practical as it is classy, there's an impressive 1800 litres of boot space available with the rear seat folded (810 litres with the rear seat upright).

Technology

Few vehicles feature an exceptional array of technological innovation in one package quite like the Touareg.

Standard across the range are practical comforts such as automatic headlights, auto-dimming mirrors and rain-sensing wipers. Other features, such as IQ. Light Matrix LED headlights in the 190TDI Premium variant, appear in a Volkswagen for the very first time. These ingenious headlights not only incorporate a headlight washing system, they use individually controllable LEDs to form a beam pattern that can be adapted to a variety of driving situations.

There's no limit to the multimedia options available to you courtesy of Volkswagen's pioneering 9.2-inch Discover Pro navigation system with Gesture Control and Voice Control. It features App-Connect~ technology that allows access to selected favourite smartphone apps via Apple CarPlay® and Android Auto™, as well as four USB ports.

Other driver aids have been fitted to make driving and life's little challenges – such as parking – that much simpler.

Negotiating shopping centre car parks is a cinch with Park Assist*. It uses Rear View Camera (RVC Plus)* and front and rear parking sensors to carefully guide you into, or out of, tight parking spaces. Other handy features include Keyless Access and Start, which takes the hassle out of getting in your Touareg and driving away, and Driving Profile Selection with 4MOTION Active Control, which allows for customisation of the driving experience.

Also included is Adaptive Cruise Control (ACC)*, an intelligent system that not only maintains a speed set by the driver but keeps a safe distance from the vehicle in front by modulating braking and accelerating as required. Adaptive Cruise Control* is particularly useful when driving long distances, as is Driver Fatigue Detection*, which provides a visual and audible signal when it's time to take a break.

01 App-Connect~ USB Interface

02 IQ. Light Matrix LED headlights

~App-Connect is compatible for selected apps with the latest smartphone versions of iOS and Android, active data service, and connection cable (sold separately).

*Safety technologies are designed to assist the driver, but should not be used as a substitute for safe driving practices.

Touareg 190TDI Premium with optional InnoVision package.

Safety

Peace of mind is yours when you drive the Touareg. A comprehensive array of active and passive safety features has been included across the range, all of which have been designed and tested with one objective in mind – keeping vehicle occupants and other road users safe.

It's apt that a vehicle as technologically superior as the Touareg should receive safety systems never seen before in the range.

Among the compelling new technology featured in the vehicle is Front and Rear Cross Traffic Assist*, an ingenious aid for helping drivers 'nose out' into traffic when vision of that traffic is obscured. Sensors monitor the area around the vehicle, with optical and acoustic warnings issued when oncoming traffic is detected. The system will implement an emergency stop if it detects that a collision is imminent.

Similarly, Pedestrian Monitoring* will first alert the driver, and then implement an emergency braking procedure if needed, to avoid striking a pedestrian or cyclist about to cross the vehicle's path.

Other safety systems are there for when you need them, such as Traffic Jam Assist*. It uses Adaptive Cruise Control (ACC)* and Lane Assist* with Adaptive Lane Guidance* to maintain the Touareg's distance from the vehicle ahead, and its position within the appropriate lane, in busy stop-and-go traffic.

The Touareg's Emergency Assist* function uses ACC* and Lane Assist* to detect steering, braking or acceleration inactivity on the part of the driver, such as when the driver falls asleep or is incapacitated. The system will initiate an escalating series of attempts to alert the driver, before performing a safe emergency stop as a last resort.

Naturally, these new systems work in concert with Volkswagen's trusted range of established safety features, such as 360° Proactive Occupant Protection*, Side Assist* and more, to prioritise safety with every drive.

*Safety technologies are designed to assist the driver, but should not be used as a substitute for safe driving practices.

02 Adaptive Cruise Control (ACC)*

03 Front Cross Traffic Assist*

Performance

The Touareg's athletic styling and broad stance are the first indication of the performance potential lurking within Volkswagen's latest premium SUV.

With its 3.0-litre turbocharged TDI engine capable of providing an impressive 190kW of power and 600Nm of torque, this is a vehicle that has been built to be driven and enjoyed. The Touareg's figures are up 10kW and 50Nm respectively over the outgoing Touareg 180TDI, offering further proof of its performance credentials.

The Touareg's potent power is transferred to the road via an efficient 8-speed automatic gearbox, which provides seamless shifts under acceleration and deceleration.

Clever 4MOTION permanent all-wheel drive ensures the vehicle retains optimum traction by continually adjusting power distribution to the front and rear axles as needed. Approximately 70 per cent of the power available can be directed to the front axle and up to 80 per cent to the rear axle depending on the driving situation and road surface.

Every Touareg receives 4MOTION Active Control, which allows the driver to tailor his or her driving experience by selecting one of four all-wheel drive modes via a rotary dial – Snow, On-road, Off-road (automatic configuration of the off-road parameters) and Off-road Individual (variable settings).

Driving Profile Selection offers further customisation of the vehicle's performance with a choice of Normal, Sport, Eco, Off-road and Individual driving modes (plus Comfort driving mode in the 190TDI Premium) all selectable from the centre console.

The Touareg inspires confidence no matter the road surface. Steel spring suspension with front McPherson struts provides the Touareg with assured ride and handling, while the addition of 4-corner air suspension with electronic damping in the 190TDI Premium variant means even greater levels of comfort when taking on rough terrain.

With its combination of precision and prowess, Volkswagen's Touareg lays down the performance gauntlet to its rivals in the premium SUV class.

02 15" Discover Premium in optional Innovision Package

03 3.0-litre turbocharged TDI engine

Optional Packages

Touareg drivers wanting to enhance their everyday driving experience with added levels of technology and innovation will want to consider one of several outstanding optional packages.

Included in the Innovision Package, for example, is a 12.3-inch Active Info Display that takes the place of a traditional instrument cluster with high-definition vehicle information such as navigation, assistance and comfort systems. Equally impressive is the windshield-projected Head-up Display, which allows the driver to monitor the vehicle's speed, navigation directions and driver assist systems without having to avert their eyes from the road.

The Discover Premium navigation system takes in-car infotainment to the next level with its 15-inch touch-screen display offering information, communication and entertainment in one integrated package. With Voice Command and Gesture Control functionality, it's also exceedingly easy to use. The addition of a volume scroll wheel in the glossy black centre console means fine volume adjustments can be made quickly and without fuss.

The Innovision Package gives drivers the ability to further customise their vehicle's interior with additional ambient lighting in a choice of 30 selectable colours.

The Touareg 190TDI Premium offers discerning drivers the choice of three additional packages. The Sound & Comfort package offers crystal clear audio with the Dynaudio Consequence Sound System and a raft of conveniences such as Area View, 4-Zone Climate Control with rear seat control panel, memory for front seats, mirrors and electronic steering column, heated outboard seats in the second row and a 90-litre fuel tank.

Selecting the R-Line package bolsters the Touareg's appearance and performance by incorporating striking exterior and interior improvements, 20-inch Nevada alloy wheels, all-wheel steering and electromechanical active roll stabilisation.

The third optional package, Panoramic Electric Glass Sunroof, gives Touareg 190TDI Premium drivers the opportunity to take full advantage of Australia's favourable weather conditions.

Touareg 190TDI Premium with optional Panormaic Sunroof and Sound & Comfort package shown.

Colours & Upholstery

The Touareg 190TDI and Touareg 190TDI Premium are available in six eye-catching paint finishes, including Antimonial Silver Metallic, Aquamarine Metallic, Malbec Red Metallic, Pure White, Silicone Grey Metallic and Deep Black Pearl Effect, with the Metallic and Pearl Effect paint finishes available at an additional cost.

Vienna leather appointed trim in the Touareg 190TDI is soft and supple to the touch, while Savona leather appointed trim in 'Soul' Black or 'Mistral' two-tone in the Touareg 190TDI Premium will have vehicle occupants sitting in the lap of luxury.

Peace of Mind

5 years Unlimited Kilometre Warranty

At Volkswagen, we pride ourselves on the highest quality standards that come with German engineering.

We back this commitment with a 5 year unlimited kilometre warranty on all new Volkswagen vehicles*.

1 year Roadside Assist

Every new Volkswagen comes with a 1 year Roadside Assist membership^.

That's 24 hour roadside assistance, emergency accommodation, car rental and towing as well as property and other assistance, all included for added peace of mind.

Volkswagen Care Plans

Volkswagen Care Plans† have you covered for your first 3 or 5 scheduled services, providing you significant savings off the total Assured Service Pricing RRP. It's convenient, hassle-free scheduled servicing easily available for purchase at your local Volkswagen Dealer.

Assured Service Pricing

Assured Service Pricing# gives you the transparency of knowing how much your service will cost up front.

Our Volkswagen Dealers have access to the latest diagnostic equipment and tools. Plus, they use Volkswagen Genuine Parts® to ensure your Volkswagen stays a Volkswagen.

You're in safe hands at your Volkswagen Dealer when it comes to servicing.

*Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners/warranty.html>. Your rights under this warranty are provided in addition to, and in some cases overlap with, consumer guarantees under the Australian Consumer Law and do not limit or replace them.

^Volkswagen Roadside Assist is provided by AWP Australia Pty Ltd ABN 52 097 227 177 trading as Allianz Global Assistance, under an arrangement with Volkswagen Group Australia Pty Limited ABN 14 093 117 876. Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners/roadside-assist.html>.

†Volkswagen Care Plans are available at participating Volkswagen Dealers for all models and covers standard items as contained in each scheduled service interval only. These Care Plans can only be purchased prior to the first scheduled service and up to 22,500 km/15 months (whichever occurs first) for all models except Volkswagen Crafter models, which is 30,000 km/15 months (whichever occurs first). The timeframe takes effect from when the vehicle is first reported in our system as 'sold'. Discount structure varies by model. For details of what is not included in a scheduled service, please refer to the program terms and conditions available here: http://volkswagen.com.au/content/dam/vw-ngw/vw_pkw/importers/au/pages/aftersales/care-plans.pdf

#Assured Service Pricing applies to the first 5 standard scheduled services of your vehicle which are scheduled to occur at every 15,000 km/12 month interval (whichever occurs first) or for Volkswagen Crafter models only, 20,000 km/12 month interval (whichever occurs first). On or before 31 December each year, Volkswagen will publish the maximum price for a specified Scheduled Service that will be applicable from, and remain fixed for, the following calendar year only. For details on the Eligible Model List, pricing, items not included and for full terms and conditions, please see <https://au.volkswagen.com.au/service-pricing-guide>.

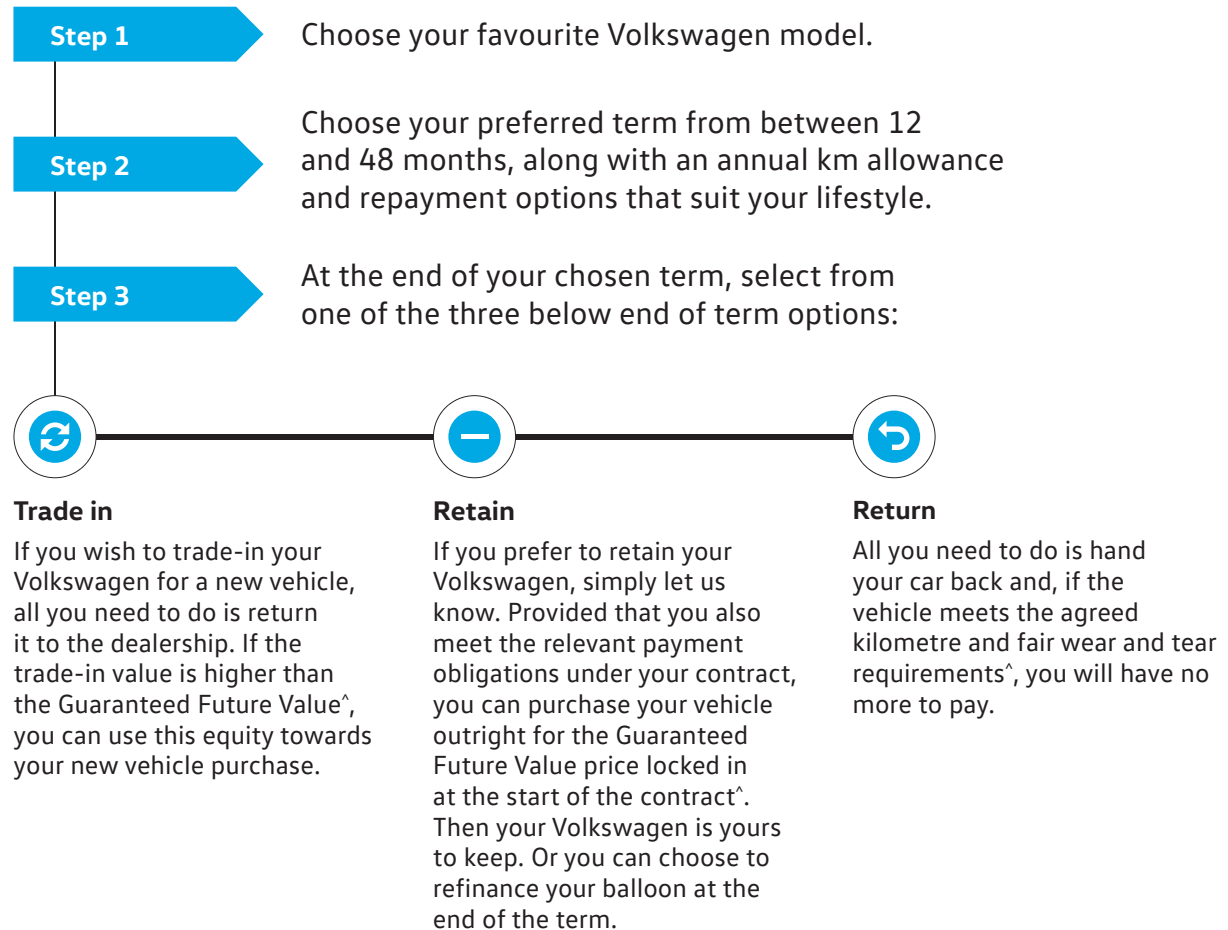

Volkswagen Choice

Volkswagen Choice

Guaranteed Future Value

Naturally we understand that your Volkswagen represents a valuable investment, so we understand that you want to maintain it in premium condition. Volkswagen Choice[^] is a finance program tailored to the requirements of Volkswagen owners by providing assurance around your Volkswagen's future value[^], whilst offering simple monthly instalment financing options.

Whether you are selecting your new Volkswagen for business or personal use, you can choose the contract term that best suits your requirements. Enjoy the confidence that comes from having locked in a minimum value up front to be attributed to your vehicle at the end of your contract[^]. There are also no account keeping fees with a fixed interest rate.

[^]The Volkswagen Choice Program consists of an option to return the vehicle to Volkswagen Financial Services (VFS)** at the end of the term and require VFS to purchase the vehicle at price known as the Guaranteed Future Value (GFV) as determined by VFS. At the end of the term, you can elect to: (1) trade-in the vehicle; (2) exercise the option to return the vehicle; or (3) retain the vehicle by paying the GFV, which is a lump sum owed to VFS at the end of the loan term after all repayments have been made. You will be liable for any loan contract deficit and additional charges, if you exceed the nominated kilometre allowance and/or the vehicle is not in an acceptable condition. Available on new and demonstrator Volkswagen vehicles for selected models. Contact your nearest Volkswagen dealer to verify eligible vehicles for this program. Fleet, government, rental buyers, hire car and chauffeur companies excluded.

**VFS is trading name of Volkswagen Financial Services Pty Ltd ABN 20 097 071 460, Australian Credit Licence 389344.

Vehicle Towing

The Owner's Manual contains both general and detailed specific information relating to the vehicle's ability for the towing of trailers and should be referenced to ensure familiarity with its contents. In addition to this information it should also be noted that for the Australian market the maximum permitted vertical load exerted by the trailer drawbar on the ball head of the towing bracket must not exceed the values as stated and shown for each model type below.

Different trailer types and different trailer manufacturers have varying towball downloads. The customer should always contact the trailer manufacturer for information as to the maximum download weight. Volkswagen does not recommend the fitting of load levelling or weight distribution devices when used with a Volkswagen Genuine towbar. When fitted and used correctly, the Volkswagen Genuine towbar is capable of meeting the towbar/towball capacities as stated and shown for each model type below.

Maximum towing capacity

The maximum gross combined mass (GCM), must not be exceeded.

Maximum combined vehicle and trailer weight

The maximum rear axle weight of the vehicle is inclusive of tongue loading and must not be exceeded. It is therefore dependent on load conditions such as passengers and luggage. For that reason it is important to take the following conditions into account.

Variant	Model Code	Maximum down ball weight with 5 occupants*	Maximum down ball weight with 2 occupants in the front seats*
3.0I/190kW V6 4V TDI EU5 without Start Stop	CR74P3	130 kg	280 kg

* When fitted with a Volkswagen Genuine Tow Bar. Towing capacities are applicable to Volkswagen Genuine Accessory Tow Bar. Towing capacity figures are maximum figures and actual towing capacity depends on factors including the laden mass of the vehicle, driving conditions and fitment of any accessories. Volkswagen Group Australia does not endorse or will not be held liable for any claim, loss or damage arising from the use or fitment of electronic trailer brakes.

Glossary

4MOTION all-wheel drive

A permanent all wheel drive system that provides the best possible traction at all road speeds, in all weather and road conditions.

The Touareg's power is handled by a transfer box bolted directly to the 8 speed automatic gearbox. The asymmetric/dynamic torque distribution by the centre differential is based on a purely mechanical system. Locking power is generated in the centre differential in proportion to the drive torque. The locking power and basic distribution of the transfer box result in the drive torque that is transferred to the front and rear axles. Approx. 70% of the drive torque can thus be directed to the front axle or approx. 80% to the rear axle depending on the driving situation and road surface. Furthermore, the mechanical torque distribution by the centre differential works closely with the wheel specific drive torque regulation by the ESC.

Adaptive Cruise Control (ACC)

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the Touareg approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Touareg then accelerates up to the pre-set desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates. ACC can be reactivated automatically by depressing the accelerator pedal.

The dynamics of the ACC system can be individually varied by selecting one of the driving programs from the driver profile selector.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-Slip Regulation (ASR)

ASR is a traction control system that prevents the wheels from spinning under acceleration by reducing engine torque.

Auto Hold function

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicle's final braking pressure. So even when you take your foot off the brake pedal, all four wheels' brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Driving Profile Selection with 4MOTION Active Control

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Normal, Sport, Eco, Comfort, Off-road and Individual. The Normal profile offers a comfortable but dynamic driving style. Sport provides faster response of the accelerator pedal, sportier damping and steering, while the DSG switches to Sport mode. Eco mode has been designed to enhance fuel efficiency by including coasting function and by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. Comfort mode offers a more relaxed and comfortable driving experience, primarily through the softer suspension setting of the adaptive chassis control. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

4MOTION Active Control provides for the convenient selection of on-road and off-road driving profiles for model equipped with 4MOTION by means of a rotary dial. Rotating the dial selects one of four special all-wheel drive modes: Snow, On-road, Off-road (automatic configuration of the off-road parameters) and Off-road individual (variable settings).

Emergency Assist

Emergency Assist monitors the driving characteristics and recognises, within the limits of the system, if the driver suddenly becomes incapable of driving (due to the vehicle not being controlled).

Emergency Assist detects a lack of activity on the part of the driver and issues repeated visual and acoustic warnings and initiates a quick jolt of the brakes to request the driver to take control of the vehicle.

If the driver remains inactive, the system automatically controls acceleration, braking and steering to slow the vehicle down and keep it in the lane. If there is sufficient stopping distance, the system decelerates the vehicle to a complete stop and switches on the electronic parking brake automatically.

When Emergency Assist is actively controlling the vehicle, the hazard warning lights are switched on and the vehicle performs a slight snaking motion within its lane to warn other road users. Ideally this will prevent a collision, or at least reduce its severity.

Emergency Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Emergency Assist utilises both the Adaptive Cruise Control (ACC) and Lane Assist driver assistance systems. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

Glossary

Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 65km/h, and calculates a fatigue estimate. If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the driven wheel/s on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

Front Assist with City Emergency Brake (City EB) and Pedestrian Monitoring functions

The Front Assist ambient traffic monitoring system uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

The traffic ahead is monitored constantly by the radar at the front. If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

The City Emergency Brake (City EB) function is a radar based emergency braking system designed to help a driver avoid a low-speed crash or to reduce its severity. At vehicle speeds below 30km/h, City EB monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, City Emergency Braking first pre-charges the brakes and makes the emergency Brake Assist system more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, City Emergency Braking independently applies the brakes very hard. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, City EB will deactivate and allow the driver to complete the avoidance manoeuvre.

Pedestrian Monitoring is an extension of the Front Assist monitoring system featuring the City Emergency Brake. The system uses a camera to monitor the side of the road and a radar sensor in the radiator grille to monitor the area in front of the vehicle and within the limits of the system, register certain situations, for example a pedestrian stepping onto the road suddenly. Using the camera the system detects pedestrians and cyclists on the side of the road and gives an immediate acoustic and visual signal to warn the driver of the possibility of danger. If the radar sensor than detects the pedestrian/cyclist and the driver does not brake, the system initiates a jolt of the brake as a warning about the critical situation, while at the same time preparing for hard braking. If the driver fails to react, the system automatically performs emergency braking, within system limits. Ideally this will prevent a collision, or at least reduce its severity.

Front Assist with City Emergency Brake (City EB) and Predictive Pedestrian Monitoring cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Lane Assist

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration and is asked to take over the steering. Additionally, if no active steering movements by the driver are recognised for longer than approximately 8 seconds, a message will appear in the Multi-Function Display in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

Glossary

When **adaptive lane guidance** is active and the system detects both lane markings to the left and right of the vehicle, the function provides permanent assistance while the vehicle is in motion. The system adopts the preferred position within the lane in which the vehicle is travelling. For example, if the vehicle is being driven slightly off-centre in the lane, the system will learn to adopt the new position within a short period of time.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

Manoeuvre braking*

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised, emergency braking is initiated to minimise possible damage.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

Park Assist

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver

by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist Plus available as part of the optional Sound & Comfort package, further aides the driver by taking over the throttle, braking and gear change functions. After starting the normal Park Assist process, the system will indicate that Park Assist Plus is available on the multi-function display. By simply holding the Park Assist Auto button on the centre console, the Touareg will automatically change gears and control the throttle, braking and steering to guide the vehicle into the intended spot. The driver must remain attentive at all times and can slow the parking manoeuvre or stop the vehicle at any time by pressing the brake pedal. The process will also be stopped by releasing the Park Assist Auto button.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

Side Assist with Rear Traffic Alert

Side Assist, is a lane change assistant that detects vehicles on the right and left hand side of the lane, in the blind spot and those vehicles coming nearer behind. The system informs with a warning light in the exterior mirror whenever a detected vehicle is close and a lane change would be dangerous. If the driver sets the indicator, the warning light begins to flash. Rear Traffic Alert warns the driver of approaching traffic at the rear of the car when reversing via an audible warning followed by a visual message in the Optical Parking System (OPS).

Side Assist also works in conjunction with the Lane Assist system. If another vehicle is in the blind spot during a lane change, the dual assist system warns the driver by means of flashing LEDs in the right-hand or left-hand exterior mirror and by vibrations on the steering wheel. It also supports the driver by means of a corrective steering intervention. This procedure occurs regardless of the state of the turn indicators.

Side Assist with Rear Traffic Alert cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Traffic Jam Assist

In congested traffic situations, Traffic Jam Assist makes driving significantly more comfortable and helps to avoid typical rear-end collision accidents. The Traffic Jam Assist function combines the driver assistance systems Adaptive Cruise Control (ACC) and Lane Assist with adaptive lane guidance.

In a speed range of 0-60km/h, the system automatically controls acceleration, braking, steering and if required, will decelerate to a stop behind a vehicle that is stopping.

Traffic Jam Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Traffic Jam Assist has been developed for use only on motorways.
