AURUS MODELS

Benefiting from every advance in global automobile expertise, unifying them all to the very best in Russian engineering, AURUS creates cars that open a new page in the history of the automotive industry. The dignity, fortitude and willingness to accept challenges, inherent in the Russian character, are reflected in the power and dynamics of AURUS cars, as well as in their authentic design and unparalleled levels of comfort and safety.

AURUS
SEN

In less than 10 years, Russian engineers, designers and specialists in automotive industry have developed a brand-new line of AURUS motors. In 2021, AURUS launched mass production at the Tatarstan-based AURUS Plant. It has proved that energy and passion can change the course of history.

INNER STRENGTH

The heart of AURUS is a 598 hp V8 Twin-turbo engine designed by Russian and international team of engineers. The engine was developed simultaneously for all AURUS models, including armored ones, becoming a guarantee of high dynamic performance for each of the AURUS cars. The combination of an internal combustion engine and a high-voltage electrical motor with 62 hp provides better acceleration dynamics and a significant power reserve.

UNIFIED MODULAR PLATFORM

AURUS cars are built on a completely new Unified Modular Platform developed by Russian engineers. This modular technology allows for the modifying of the wheelbase, ground clearance, and length to develop a unique exterior and interior design, as well as to adopt the manufacturing resource for the production of various models.

CREATED IN RUSSIA

At the heart of AURUS is the promise of full adaptability to climatic and road conditions as varied as those found in Russia, while ensuring absolute control.

The exceptional ground clearance, technological features of the suspension, and structural rigidity with dynamic stability control help AURUS cars to easily overcome obstacles along the route, and deal with sudden temperature changes, from extremely low to extremely high.

INNOVATIVE GEARBOX

AURUS cars are equipped with a 9-speed gearbox, developed by the Russian design and production company and optimized for the requirements of a hybrid motor. It ensures a high efficiency with reduced harmful emissions.

SAFE & SECURE ENVIRONMENT

Already today, AURUS cars are considered by many to be the most secure luxury cars in the world. A reinforced body structure and elements of the armored versions guarantee the highest level of passengers protection for all AURUS cars.

BEYOND COMFORT

The clean lines of arches and contours, perfection in every detail, and luxurious natural materials immerse the passenger in an atmosphere of absolute comfort. Anatomically shaped seats offer a variety of adjustment mechanisms, including to the longitudinal, height, backrest, cushion length, and lumbar support. With a neck and shoulder support, cushion and backrest ventilation, as well as massage options, driver and passengers will continue to enjoy the ride, no matter the duration.

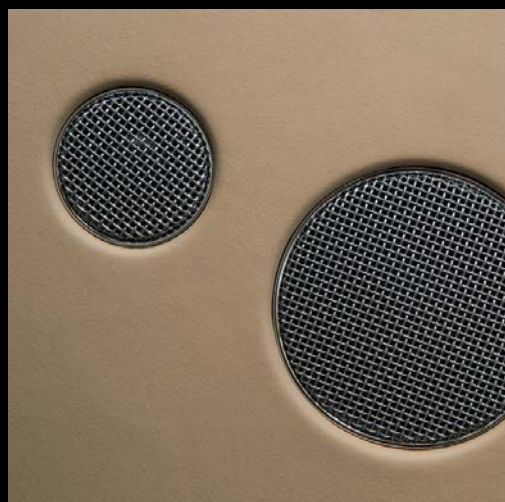

A minibar, folding tables and AURUS-branded crystal glasses, waiting for their finest hour in an elegant built-in box, are also at the passengers' disposal.

Every detail in the AURUS interior is designed for untroubled relaxation. The four-zone climate-control system furnishes individual temperature conditions for each passenger. A variety of lighting options emphasize the beauty of the interior and allow the customization of the interior lighting, depending on the time of day and the passengers mood.

With the AURUS audio system, passengers can enjoy pure, immersive, and rich sound.

The most complicated thing is to be simple. The easy-to-use and highly intuitive HMI (Human Machine Interface) of the AURUS shows that we have achieved just that. Every element, symbol and sign of this interface is carefully elaborated and truly unique.

All sounds produced by the multimedia system were performed by live orchestral instruments and recorded in a professional music studio. Exclusively for AURUS.

TOUCH FOR AUTHENTICITY

AURUS interiors reflect and celebrate the natural wealth of Russia. Precious wood and genuine leather are worked with impeccable craftsmanship. This is the luxury of touching the authentic, and the pleasure of tactile and aesthetic contrasts.

A close-up photograph of a car's body panel, likely a door or fender, finished in a metallic bronze or copper color. The surface has a fine, grainy texture. In the center, the word "SENAT" is embossed in a raised, silver-colored, serif font. The lighting is dramatic, coming from the side, which creates strong highlights and deep shadows, emphasizing the three-dimensional quality of the badge and the contours of the car's bodywork.

SENAT

THE COURAGE TO LEAD

AURUS Senat has been designed and built in Russia to open a new page of luxury motoring history.

All-wheel drive combined with a hybrid engine, a ground clearance of 200 mm, and perfect safety systems help AURUS Senat to stand out from other vehicles of this class. It effortlessly overcomes obstacles while maximizing passenger comfort.

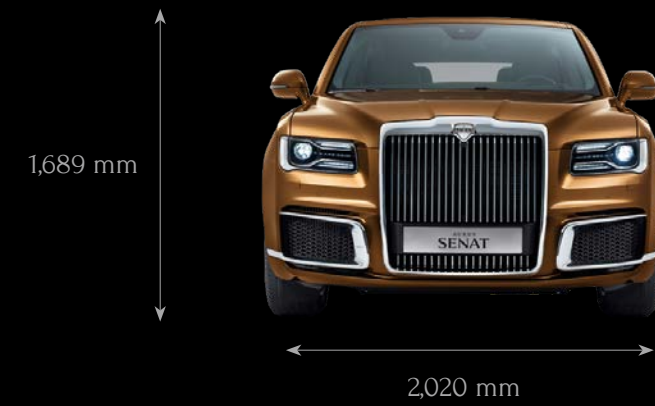

AURUS Senat is the embodiment of self-confident power, a triumph of balance and proportion. Its absolute assurance is matched by its classic elegance. Form is perfectly matched to function, as in the finest bespoke suit.

Passenger comfort in AURUS Senat is inspired by first-class air travel. Reclining seats and the widest space in the class for rear-seat passengers ensure maximum comfort, while always providing maximum safety. The seat belt system is able to gently retain occupants in the event of an emergency, even with the seat reclined as far back as possible.

SPECIFICATIONS

Dimensions	
Length	5,632 mm
Width	2,020 mm
Height	1,689 mm
Wheelbase	3,300 mm
Ground clearance	200 mm
Weight	
Max gross weight	3,490 kg
Curb weight	3,235 kg

Engine	
Power Unit	Hybrid
IC Engine	V8 Twin-turbo
Engine Capacity	4,400 cm ³
IC Engine Power	598 hp
Electric Motor Power	62 hp
Torque	880 Nm / 2,200-4,750 rpm
Maximum speed	250 km/h
Acceleration (0-100 km/h)	6 sec
Transmission	
Gearbox	AT9
Drive type	AWD

Note: The indicated values are measured under standardized conditions and may differ from the actual values depending on driving habits, terrain, road and weather conditions, fuel used, vehicle load, model and size of the tires in use, and many other factors. Vehicle weight and other specifications are given for the standard model. The elements of the armored version and additional equipment increase the weight and affect the vehicle's performance. The information presented may be partially inaccurate due to changes in product specifications that have occurred since its release. Some equipment described or illustrated may only be available at an additional cost. Please contact your AURUS representative for updates before placing an order. The manufacturer reserves the right to change prices, colors, materials, specifications, and models at any time without prior notice.

KOMENDANT

THE NATURE OF POWER

AURUS Komendant is the first luxury SUV made in Russia, the country of the longest roads, coldest winters and endless wild landscapes. It is the embodiment of the true nature of power fusing together the ultimate control over the road and the pleasure of driving. For AURUS Komendant, the powerful and unpredictable forces of nature are not an obstacle, but rather an inspiration for travel and adventure.

AURUS Komendant's ground clearance is up to 260 mm. The adaptive air suspension provides the appropriate ground clearance on any road surface, responds to speed changes and steering signals, and offers a feeling of confidence and stability on the go. A higher standing in the case of the AURUS Komendant is not a metaphor.

AURUS Komendant is built on the Unified Modular Platform. In combination with a shortened wheelbase, all-wheel drive, and a 9-speed gearbox, Komendant guarantees high dynamic performance, responsiveness, and control.

AURUS Komendant's style expresses sophisticated elegance, power, and form. Balanced, sculptural and monumental, it arrests sight. A new grill and diverging horizontal elements create a rhythmic pattern where stability supports dynamics, and vice versa. Without doubt, AURUS Komendant is the finest link between city streets, highways, and country tracks.

Everything in AURUS Komendant is done to ensure that driver and passengers enjoy aesthetic pleasure just as great as their comfort. The optimal seat height and the tilt of the steering wheel ensure a comfortable seating position for the driver, complemented by excellent visibility. Supremely comfortable rear seating with memory, ventilation and massage options, stylish interior lighting and a modern multimedia system allow passengers to enjoy every moment of the journey.

SPECIFICATIONS

Dimensions	
Length	5380 mm
Width	2004 mm

ULTIMATE SAFETY

Usually, armored vehicles are created by building on existing models. However, in the case of AURUS, the armored and unarmored cars were designed simultaneously, resulting in unique design solutions in the protected vehicle segment. AURUS cars provide unprecedented level of ballistic and anti-explosion protection that significantly exceeds what other manufacturers can offer.

The armored version of an AURUS includes ballistic protection of the body (BP5), explosive protection of the roof, floor pan, and fuel tank. 20" bullet-proof wheels are fitted with additional support that allows the vehicle to continue moving even after complete loss of tire pressure.

The emergency exit system allows occupants to escape even when the doors are locked. A fire extinguishing system, fresh air supply, autonomous power supply for special systems, Alarm Mode and external Intercom are also provided.

AURUS MEANS BESPOKE

AURUS Atelier is a workshop where design turns into the embodiment of one's personal style. Customers are invited to choose the car's body color (from the palette of classic or original AURUS colors), the color and texture of leather finishings, and the type and method of veneering.

The future owner is invited to be the co-creator of their AURUS.
Every consideration is taken into account to ensure the complete satisfaction of the client's desires, from the embroidering of a personal monogram or family crest on the headrests, to applying a personalized pattern on the rear row panels, or engraving on the door sills.

AURUS represents the greatest advances in Russian engineering combined with the most modern global production processes. These industrial, scientific and technological breakthroughs by Russia are today offered to the world.

AURUS. We Go Further.
